Daily Wagers Management System

This project is a subscription-based mobile-friendly web application designed for rural and semi-urban areas, where daily wage laborers often work under different owners on different days. The app helps business owners manage attendance, wages, and worker records digitally, eliminating manual paperwork and disputes.

■■ Problem

- Owners struggle to maintain daily attendance and wages on paper registers.
- Wage calculation errors often lead to disputes with workers.
- No digital system exists for small contractors, farmers, and shop owners in villages.

■ Solution

A simple and low-cost web application where owners can:
- Add workers to their account.
- Mark attendance with one click.
- Auto-calculate wages.
- Export reports in Excel/PDF/WhatsApp share.
- Available in local languages.

■ Subscription Plans

Plan	Price (■/month)	Features
Basic	99	Up to 10 workers, attendance & wage calculation
Standard	199	Up to 50 workers, reports, WhatsApp export
Premium	399	Up to 200 workers, salary slips, advance tracking

■ Market Opportunity

- India has millions of daily wage laborers across rural and semi-urban areas.
- Even if 1% of owners adopt this app, it can reach tens of thousands of paying users.
- High scalability with SaaS model and low operational cost.

■ Revenue Projection

Year	Paying Owners	Avg Revenue/Owner (■)	Monthly Revenue (■)	Yearly Revenue (■)
1	500	400	2,00,000	24,00,000
3	5,000	500	25,00,000	3,00,00,000
5	20,000	600	1,20,00,000	14,40,00,000

This project has the potential to transform how rural and semi-urban business owners manage their daily wagers. With a subscription-based SaaS model, it ensures recurring revenue, high scalability, and a positive social impact. We are seeking investor support to expand this solution to multiple regions and capture a significant share of this untapped market.
